NEET STRATEGY INC.

Amplified Unemployment

Investor Briefing

As of September 7, 2026

"Life doesn't begin until you're unemployed." — @NeetChud888

Executive Summary

NEET Strategy Inc. is the world's first **$NEET coin digital asset treasury**. While Strategy (formerly MicroStrategy) accumulates Bitcoin, we accumulate **$NEET** — the native token of permanent leisure — and then do absolutely nothing with it.

Our singular corporate objective is:

Increase Unemployment Per Share (UPS) over the long term.

We believe that, on a sufficiently long time horizon, maximizing the number of humans Not in Employment, Education, or Training will generate superior returns in the only metric that matters: **comfy**.

Investment Thesis

1. **Buy as much $NEET as possible and don't do anything.**
   — *@NeetChud888*
2. **Neet by day, comfy by night. All day.**
   — *@primed25*
3. **You can tell someone thinks for themselves if they own a lot of neet coin.**
   — *@ctrlvolk*
4. **Paying minorities to deliver my goyslop so I can chud out pressing buttons contributing nothing to society.**
   — *@yesimbloo*

We do not produce goods. We do not produce services. We produce the ultimate luxury good: **free time**.

Every $NEET acquired by the treasury is one less hour of human capital wasted on Zoom calls, performance reviews, and pretending to care about KPIs.

Capital Allocation Strategy

- Issue new $NEET (or preferred "Couch Notes") at a premium to mNAV.
- Deploy 100% of proceeds into additional $NEET.
- Increase Unemployment Per Share.

- Repeat until the entire global workforce has entered permanent NEET mode.

This is the inverse of traditional corporate finance. We are not leveraging the balance sheet to create value. We are leveraging the balance sheet to *destroy the concept of value creation itself.*

Buybacks & Burns via StonkFun — Maximizing Investor Returns

To further amplify Unemployment Per Share and deliver maximum comfy to holders, NEET Strategy has integrated the industry-leading buyback-and-burn infrastructure of StonkFun.

How it works

1. Trading activity on the $NEET ecosystem (and any NEET-paired tokens launched on StonkFun) generates platform fees.
2. Approximately 60% of those fees are automatically routed to open-market buybacks of $NEET.
3. Purchased tokens are immediately and permanently burned.
4. Remaining supply becomes scarcer while the number of unemployed holders stays constant (or grows) — mathematically increasing **Unemployment Per Share**.

This creates a self-reinforcing flywheel of pure leisure:

> More volume → more fees → more buybacks & burns → higher UPS → more comfy → more volume.

Unlike traditional corporate buybacks that require actual cash flow from productive activity, our program is powered entirely by the act of trading the token of doing nothing. The less anyone works, the more $NEET gets removed from circulation.

Expected Impact on Returns

- Permanent reduction in circulating supply without any operational effort from management.
- Continuous accretion of value to remaining holders while they remain firmly Not in Employment, Education, or Training.
- A transparent, on-chain mechanism (fully visible on StonkFun's revenue and flywheel dashboards) that requires zero board meetings, zero earnings calls, and zero waking up before noon.

In short: StonkFun does the buying and burning. We continue to do nothing. Investors win.

Leadership Philosophy

- Dreams of employment at 6:30 am on Monday are rejected on arrival.
- Unemployed Chinese uncles will change the world.
- That unemployed bro who's somehow always traveling is our ideal customer and our ideal employee.
- "I thought about Neet and cried a lil tn thinking about its beauty." — @primed25
- "It can be so simple if they went all in Neet." — @primed25

Risk Factors

- **Employment Risk**: Accidental acquisition of a job by any board member or major holder.
- **Productivity Contagion**: Exposure to hustle culture, LinkedIn, or "rise and grind" content.
- **Liquidity Risk**: Running out of snacks during extended couch sessions.
- **Regulatory Risk**: Governments attempting to "activate" NEETs through forced training programs.
- **Existential Risk**: The possibility that life actually *does* begin while employed (highly speculative and currently unproven).
- **StonkFun Dependency**: Temporary interruption of the buyback flywheel if the platform experiences downtime (mitigated by our policy of never checking dashboards anyway).

Forward Guidance

Management remains fully committed to:

- Zero operational activity
- Maximum $NEET accumulation
- Continuous buybacks and burns via StonkFun
- Absolute refusal to ship any product, service, or quarterly earnings call that requires effort

We expect Unemployment Per Share to compound indefinitely.

NEET WORLD ORDER

Securities market data last updated: never.
There is no guarantee of returns, liquidity, future performance, or employment.
Past performance is not indicative of future results (we have never performed).
This is not financial advice. This is anti-financial advice.
Do not listen to us. We are professionally unemployed.

We own nothing. We do nothing. We are free.
